总结

查询的完整格式

```
SELECT select_expr [,select_expr,...] [  
    FROM tb_name  
    [WHERE 条件判断]  
    [GROUP BY {col_name | position} [ASC | DESC], ...]  
    [HAVING WHERE 条件判断]  
    [ORDER BY {col_name|expr|position} [ASC | DESC], ...]  
    [ LIMIT {[offset,rowcount | row_count OFFSET offset]}  
]
```

完整的select语句

```
select distinct *  
from 表名  
where ....  
group by ... having ...  
order by ...  
limit start,count
```

执行顺序为

```
from 表名  
where ....  
group by ...  
select distinct *  
having ...  
order by ...  
limit start,count
```

实际使用中，只是语句中某些部分的组合，而不是全部
